

GoStop

AUTOMATION TESTING PROJECT

End-to-End Selenium + Cucumber BDD
Framework for Travel Booking

Project Overview

Application Under Test

GoStop.com — Online Travel & Hostel Booking Platform

Selenium 4.41

Cucumber 7.33

TestNG 7.12

Java · Maven · Log4j · Allure Reports · Page Object Model

Developed by: Himank Patidar

Project Goals & Technology Stack

Objectives

- Automate the end-to-end booking flow on GoStop.com
- Validate destination selection, room & experience booking
- Verify guest detail entry and payment initiation
- Enable regression testing with reusable step definitions
- Integrate Allure reporting for rich test results

Technology Stack

Test Automation	Selenium Java 4.41.0
BDD Framework	Cucumber 7.33.0
Test Runner	TestNG 7.12.0
Build Tool	Apache Maven
Logging	Log4j 2.25.3
Reporting	Allure 2.32.0

Project Architecture — Page Object Model (POM)

src/main/java

base/ · pageObject/

src/test/java

stepDefinitions/ · hooks/ · cucumberOptions/

src/test/resources

features/ (A_SelectThePlace, B_validateRoom,
C_ValidateGuestDetail)

src/main/resources

selenium-server-4.44.0.jar · log4j2.xml

Base.java

ThreadLocal WebDriver, Properties loader

HomePage.java

Destination, Location & Date selectors

RoomAndExperiencePage.java

Room type, Paragliding, Proceed button

GuestPage.java

First/Last name, Mobile, Email, Pay button

ScenerioHook.java

@Before setup ChromeDriver · @After screenshot + quit

Cucumber BDD — Test Scenarios

@SelectPlace · Feature A — Select Place & Date

- User navigates to the GoStop home page
- Clicks 'Destinations' and selects McLeod Ganj
- Selects 'McLeodganj, Bhagsu' as the specific property
- Applies check-in (Jun 30) and check-out (Jul 25) dates via URL

@ValidateRoomAndExperience · Feature B — Room & Experience

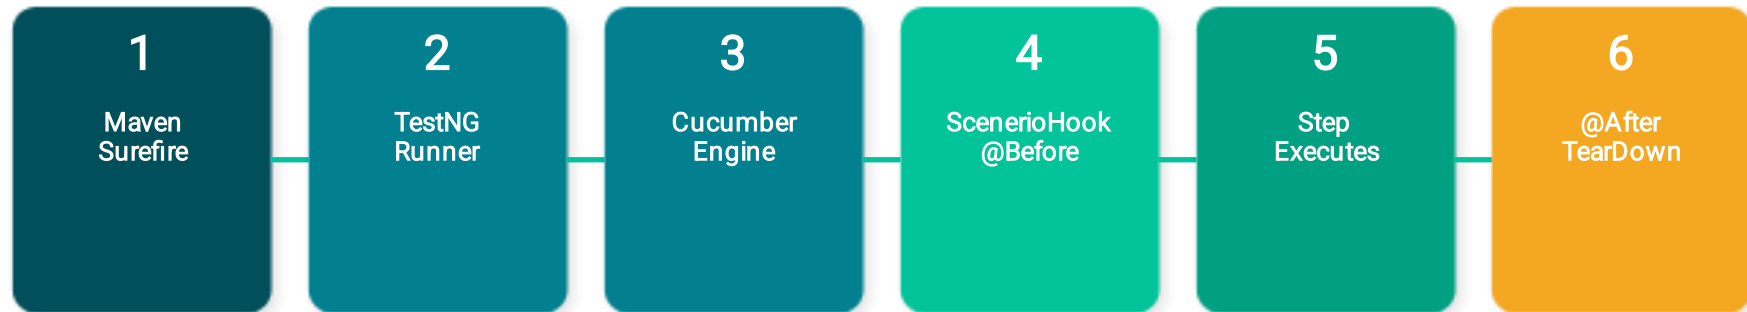

- Builds on Feature A (destination + dates selected)
- Selects room type: 'Bed + Breakfast'
- Adds an experience: 'Paragliding'
- Clicks 'Proceed to unlock offers'

@ValidateGuest · Feature C — Guest Details & Payment

- Builds on Feature B (room + experience selected)
- Fills guest: Jay Pandya, +91 9876543210, jay098@gmail.com
- Clicks 'Proceed to Pay' to initiate checkout

⚡ All 3 features share step definitions via reusable Gherkin syntax. Tags enable selective test execution.

Test Execution Flow

Triggers testng.xml on mvn test
cucumberOptions/TestRunner.java orchestrates suites

Parses .feature files,
matches step defs

Launches ChromeDriver,
sets implicit wait

POM actions via Selenium
WebDriver

Screenshot (Allure) +
driver.quit()

WebDriverWait

ExpectedConditions used for dynamic
element waits (20s timeout)

JavascriptExecutor

Scroll & JS-based interactions for
complex UI elements

ThreadLocal<WebDriver>

Thread-safe driver management in Base
class for parallel execution

Key Features & Design Decisions

Feature Files

3 independent .feature files with Gherkin syntax covering Place, Room & Guest flows. Tags enable targeted runs.

Shared Step Defs

Given/When/Then steps are shared and reused across features, avoiding duplication — DRY principle.

URL-based Date

Date selection bypasses fragile calendar UI by appending ?checkin=&checkout= query params directly.

Allure Reports

Screenshots auto-attached to passing scenarios in @After hook via Allure API for visual test history.

Thread-Safe Driver

ThreadLocal<WebDriver> in Base class enables parallel test execution without driver collisions.

Externalised Config

data.properties file holds URL, frameworkUrl & browser — easy environment switching without code change.

Summary & Conclusion

Libraries Used

- Robust BDD framework with clean separation of concerns using POM
- Resilient date handling via URL parameters avoids flaky calendar interactions
- Reusable hooks with Allure integration ensure maintainable test reporting
- ThreadLocal WebDriver design supports future parallel execution scale-out

Built with Selenium · Cucumber · TestNG · Maven · Allure · Log4j
